Introduction

This report documents the prototype development activities for DreamWork, a mobile application designed to help college students find flexible part-time jobs and internship opportunities. Building on the foundations established in Assignment 04, this phase focused on transforming our planned user stories and design concepts into a functional prototype.

The development process for Assignment 05 was managed using Agile Scrum, following structured sprints, iterative implementation, and continuous team collaboration. Throughout Sprints 1-6, we refined user stories, created interactive screens, implemented core features, and reviewed progress through Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives.

This report includes the updated release plan, evidence of sprint activities, explanations of all prototype screens, and contributions recorded through tools such as Jira, OneNote, GitHub, and Figma. It concludes with the recorded prototype demo link and individual reflections, demonstrating our team's progress from planning to building the first working version of DreamWork.

Project Summary

The DreamWork project focuses on developing a mobile application that connects college students with flexible part-time jobs, internships, and early career opportunities. Following the initial planning and design phases completed in earlier assignments, Assignment 05 moves into the core development stage, where we build the first working prototype of the app using Agile Scrum methodology.

Throughout Sprints 1-6, we translated user stories into functional screens, implemented key features, and refined the user experience based on iterative feedback. Jira, OneNote, GitHub, and Figma were used to manage tasks, track progress, maintain documentation, and support version control. The prototype demonstrates essential user flows such as account creation, login, employer registration, and basic navigation.

This report presents the updated release plan, sprint evidence, prototype screenshots, and development documentation. It highlights the team's progress toward building a functional and user-focused application, leading into the final product demonstration planned for Week 11.

Release & Sprint Documentation

Sprint Planning

Sprint Planning was conducted at the start of each sprint to define clear goals, prioritise user stories, and assign work based on team capacity. The team reviewed all backlog items, estimated story points using Planning Poker, and selected items aligned with the prototype goals for Weeks 7–10.

During Sprint 3 and Sprint 4, core features such as job applications, employer account creation, push notifications, and job saving were prioritised. The planning process helped ensure all user stories were aligned with the Definition of Ready (DoR) before moving into development.

Start Sprint

6 work items will be included in this sprint.

Daily Stand-Ups

Daily Stand-up meetings were held to maintain continuous progress and communication. Each team member updated the board by answering:

- What I completed yesterday
- What I plan to complete today
- What blockers I have
- These meetings helped identify issues quickly and keep development aligned with the sprint goals. Stand-up notes were recorded in OneNote and supported decision-making during development.

03/11/2025

Hi guys, sorry but I won't be able to come in today for the lab. We can meet on Teams later during the day if you want. I have done most of the work on OneNote and Jira, along with presentation and pdf report 10:53 ✓

You can review it and add some contributions if you feel like something is missing 10:55 ✓

Kauan

0:26 14:01

It's fine 14:13 ✓

Most of it is finished 14:13 ✓

Just finish the report if you can please 14:13 ✓

https://atlantictu-my.sharepoint.com/:w:/g/personal/g00424689_atu_ie/ES3OVeWvPFFIrULY8-VSN9ABZWr_bx7RQxXbUd18xOP4lw?e=NFyFJH 14:14 ✓

14:34 ✓

 **Kauan**
I will work on it when I get home

14:35

Sprint Reviews

At the end of each sprint, the team held a Sprint Review to demonstrate the completed user stories using the Jira board.

Sprint 1

Completed

- Environment and tool setup (GitHub, Jira, OneNote structure)
- Figma project created with initial components
- Login flow
- Job search UI (search bar, results list)
- User profile setup flow
- User registration and login prototypes

Not Completed

- Error state screens for login
- Interaction animations

Product Increment

A functional low-fidelity prototype covering the authentication flow, job search UI and user profile setup flow.

Sprint 2

Completed

- Receiving smart job suggestions
- UI for viewing job details
- Updated interactions between screens

Not Completed

- Design update

Product Increment

Functional mid-fidelity screens for smart job suggestions and viewing details for each job.

Sprint 3

Completed

- User story mapping updated
- Applying to jobs screen
- Creating employer account and login in with employer ID

Not Completed

- Interaction between screens
- Tracking status of applications feature

Product Increment

Functional mid-fidelity screens for jobs application and employer authentication.

Sprint 4

Completed

- Push notifications for new listings
- Saving job listing to review
- Updated UI for viewing job details

Not Completed

- Update UI for the last step of user profile setup
- Tracking status of applications feature

Product Increment

Functional high-fidelity screens for push notifications and saved job listings.

Sprint 5

Completed

- Viewing student profile
- Main navigation system

Not Completed

- Posting job listings
- Tracking status of applications feature

Product Increment

Functional high-fidelity screens with intuitive and clean navigation and user profiles.

Sprint 6

Completed

- User password security
- Confirmation of font readability
- Confirmation of performant job search results
- Tracking status of applications

Not Completed

- Posting job listings; moved to backlog for future releases

Product Increment

Functional high-fidelity screens with secure password system, readable fonts, performant search results and application tracking features.

Sprint Retrospectives

Sprints 1-3

What Went Well

- Effective communication on tool usage
- Quick agreement on design direction

What Didn't Go Well

- Mediocre teamwork during setup phase
- Lack of meetings due to time constraints
- Time spent learning new tools was underestimated
- Login error flows were not fully designed

Improvements

- Allocate setup buffer time in future sprints
- Plan UI states before starting Figma work
- Improve communication

Sprints 3-6

What Went Well

- Good prototyping practices
- Improved communication

What Didn't Go Well

- Inadequate accomodation for time constraints
- Learning curve of certain tools
- Some of the prototype designs needed a lot of correction

Improvements

- Better guide the team through the tools needed for the project
- Commit more attention to the required tasks

Updated Release Plan

Original: 12 sprints planned

Remaining time: 6 sprints

Team size: **3 members** (Scrum Master, Product Owner, Tester - all devs)

Total backlog: **119 story points**

Total user stories: **21**

Theoretical velocity required:

$$119 / 6 = \sim 20$$

Because it would be too high of a workload for 3 members, it would contribute significantly towards burnout and quality drop. We needed to prioritize our scope.

To deliver our **Minimum Viable Product**, we needed to trim the scope and move some optional features to further releases beyond our current timeline.

Our approach:

Sprint 1-2: Foundation & MVP core

Sprint 3-5: Major Features

Sprint 6: Accessibility and Security

The achievable scope for our team turned out to be around 70-80 story points in total, with **velocity** of about **13 story points per sprint**.

Sprint 1

User Story	Story Points	Epic
Create student account	3	User Accounts & Profiles
Setup student profile	5	User Accounts & Profiles
Job search	5	Job Search & Filtering

Sprint 2

User Story	Story Points	Epic
View job details	5	Job Search & Filtering
Receive smart job suggestions	7	Smart Recommendations & Notifications

Sprint 3

User Story	Story Points	Epic
Track status of applications	3	Job Management
Apply to jobs	5	Smart Recommendations & Notifications
Create employer account	5	Employer Dashboard

Sprint 4

User Story	Story Points	Epic
Receive push notifications for new listings	7	Smart Recommendations & Notifications
Save job listings to review	7	Job Management

Sprint 5

User Story	Story Points	Epic
View student profile as employer	3	Employer Dashboard
Easy and clean navigation	7	System Quality

Sprint 6

User Story	Story Points	Epic
Performant job search results	5	System Quality
User password security	5	Security
Readable fonts	3	System Quality

Total SPs for all sprints: **76**

Update 30/11/2025:

- Moved Posting job listings to future release

Sprint 3 had a duration of one week, running from 17/11/2025 to 24/11/2025.

The sprint goal was:

“Start working on the second release of the DreamWork app, comprised of main features beyond MVP.”

This planning session focused on expanding core functionality, such as job application features, employer onboarding, and enhancements to improve the user experience. These tasks were prioritised based on importance, complexity, and their relationship to the prototype requirements for Assignment 05.

Sprint	Estimated Points	Focus Area
Sprint 1	13	Setup and foundation features
Sprint 2	12	MVP core student features
Sprint 3	13	Job features + employer account
Sprint 4	14	Notifications, saving job listings
Sprint 5	15	Student profiles, navigation
Sprint 6	13	System quality and documentation

Prototype Development

The prototype development phase focused on transforming the DreamWork user stories into functional, interactive screens that demonstrate the core features of the application. Development followed the Agile Scrum framework, ensuring that each

implemented feature aligned with the sprint goals, acceptance criteria, and the Definition of Done (DoD).

Throughout Sprints 1-6, the team collaboratively designed, built, and tested screens using tools such as Figma, Jira, GitHub, and OneNote

1. Create Student Account

This screen introduces new users to the DreamWork platform by allowing them to register as students. It collects essential information such as name, email, and password to create a secure and personalised account. The layout is intentionally simple and accessible, ensuring that first-time users can complete the registration without confusion. The use of clear labels, input validation, and a clean UI helps establish trust and ease of use from the very first interaction.

The screenshot displays a registration form for a student account on the DreamWork platform. At the top, there is a logo featuring a blue graduation cap with a book inside, and the word "DREAMWORK" in bold, black, uppercase letters below it. The heading "Create your student account" is centered in bold black text. Below this, there are four input fields, each with a label above it: "First name", "Last name", "Email", and "Student credentials". Each field is a simple white rectangle with a thin grey border. At the bottom of the form is a blue rectangular button with the word "Continue" in white text. Below the button, there are two lines of text: "Already have an account? [Log in.](#)" and "Want to sign up as an employer? [Click here.](#)".

User Story: Registration (Jakub)

As a student, I want to create an account so that I can access job listings and save my preferences.

2. Password Security

This screen educates users on the password standards required by DreamWork. It outlines the criteria needed for strong password creation, such as minimum length, character types, and complexity. By presenting these requirements upfront, the system reduces failed registration attempts and enhances overall account security. This step also ensures that users follow best security practices, contributing to a safer experience across the platform.

The screenshot shows a registration form for DreamWork. At the top is the DreamWork logo, which consists of a blue graduation cap icon above the word "DREAMWORK" in bold, uppercase letters. Below the logo is the heading "Create your student account". The form contains two input fields: "Password" and "Confirm password". Below these fields is a password strength indicator box. It shows the word "Strong" next to a green progress bar that is nearly full. Below the progress bar, it states: "Must be at least 12 characters, include uppercase, lowercase, number, and symbol." At the bottom of the form is a blue "Sign Up" button. Below the button are two links: "Already have an account? Log in." and "Want to sign up as an employer? Click here."

Must be at least 12 characters, include uppercase, lowercase, number, and symbol.

Sign Up

[Already have an account? Log in.](#)

[Want to sign up as an employer? Click here.](#)

3. Student Account Confirmation

After completing the registration form, users are presented with this confirmation screen. It verifies that their account has been successfully created and guides them toward logging in for the first time. The screen provides reassurance and a clear next step, helping maintain a smooth user flow and reducing drop-offs during onboarding.

Hello, **Student!**

First, let us know you a little better.
Let's [set up your profile](#).

Where do you live?
This will help us match your location to your nearest employers.

4. Login as a Student

This screen allows returning users to access their DreamWork account by entering their registered email and password. It includes basic input validation and helpful prompts for incorrect login attempts. Upon successful authentication, students are directed to their personalised dashboard. The screen focuses on clarity and efficiency, ensuring that users can log in quickly without unnecessary friction.

[Want to log in as an employer? Click here.](#)

5. Create Employer Account – Step 1

The employer registration process begins here. This screen captures foundational business information such as company name, email address, and contact details. The onboarding is broken into multiple steps to prevent overwhelming new users. This allows employers to create an account smoothly and efficiently, laying the groundwork for posting job listings on the platform.

DREAMWORK

Create an employer account

Want to create your own job listings? Provide us with details about your company in a few quick steps.

City

Company address

Continue

6. Create Employer Account – Additional Steps

Following the initial registration step, additional screens collect further details such as company description, location, industry type, and job posting preferences. Breaking this information into separate screens enhances usability and ensures accuracy. This structured approach ensures that employers provide all required information before accessing platform features.

7. Save Job Listing

This screen enables students to save job postings they find interesting. Saved listings allow users to revisit opportunities without having to search again, improving convenience and enhancing user engagement. The feature helps students manage multiple opportunities effectively and keep track of roles they intend to apply for later.

8. Job Search

This screen showcases a streamlined, user-friendly job search platform designed to help candidates find relevant opportunities efficiently.

The main screen presents two search methods:

A detailed search filter, allowing users to specify a Job Title, Keywords, and filter by Category (e.g., UI/UX, Internship, Frontend).

A "Smart Suggestions" feature, which offers personalized job recommendations for a more tailored experience.

Upon searching, users are taken to a results page displaying listed jobs, such as "Junior UX Designer" and "Frontend Developer." Each listing clearly displays the job title, company, a brief description, key tags (like job type and required skills), and location.

Crucially, each job has clear "Save" and "Apply" buttons, making the next steps for the user simple and intuitive.

In essence, this Screen visualizes a modern job board that prioritizes clarity, filtering precision, and ease of use to connect candidates with their ideal roles.

9. Apply to Job

The image displays three sequential screenshots of the 'Apply to Job' process in the Dreamwork app, separated by dark vertical bars. Each screen features the Dreamwork logo in the top right corner and a bottom navigation bar with icons for Home, Search, Saved, and Profile.

- Screen 1: Apply to Job (Step 1 of 3)**
 - Job Details:** Mobile App Developer, Innovate Corp. - New York, NY
 - Your Information:** Fields for Your Name, Email, and Phone Number.
 - Upload Resume:** A blue button with options to 'Upload from Phone' or 'Import from Cloud'.
 - Add Cover Letter (Optional):** A button with a plus icon.
 - Quick Apply:** A prominent blue button.
- Screen 2: Employer Requirements (Step 2 of 3)**
 - What is your current or expected graduation date?** A date picker with a plus icon.
 - Are you legally authorized to work in the country where this job is located?** Radio buttons for 'Yes' and 'No'.
 - How many years of professional experience do you have with mobile app development?** A 'Select Experience' dropdown.
 - Review:** A blue button at the bottom.
- Screen 3: Review Your Application (Step 3 of 3)**
 - Mobile App Developer**
 - Your Information**
 - Resume/CV**
 - Cover Letter**
 - Employer Requirements**
 - Submit:** A blue button at the bottom.

Step 1. Apply to Job (User Information)

The first screen introduces the job application process.

- It shows the job title **“Mobile App Developer”** and the company/location.
- Users enter their **name**, **email**, and **phone number** in simple form fields.
- A button allows users to **upload their résumé**, either from their phone or cloud storage.
- There’s also an option to **add a cover letter** (optional), with a plus icon to attach the file.
- A prominent **“Quick Apply”** button lets users move forward after filling in their details.
- The bottom navigation bar includes icons for **Home**, **Search**, **Saved**, and **Profile**.

Step 2. Employer Requirements

The second screen collects additional information required by the employer.

- Users select their **current or expected graduation year**.
- They answer a **legal authorization to work** question with Yes/No buttons.
- They choose their **years of experience** in mobile app development using a dropdown.
- A **“Review”** button moves them to the final step.
- The same bottom navigation bar appears for consistent app layout.

Step 3. Review Your Application

The third screen is a summary page where users can review all the information before submitting.

- The job title is shown again at the top.
- Sections include:
 - **Your Information**
 - **Résumé/CV**
 - **Cover Letter**
 - **Employer Requirements**
- Each section is displayed as a card-style block, presumably allowing users to tap and review details.
- A large **“Submit”** button sits at the bottom to finalize the application.

Step 4. Review Your Application

This screen is a continuation of the application review stage.

- It lists all major sections of the application:
 - **Job Title**
 - **Your Information**
 - **Résumé/CV**
 - **Cover Letter**
 - **Employer Requirements**
- Each section is displayed as a tappable card for users to open and edit if needed.
- A **“Go Back”** button allows users to return to the previous step.
- The bottom navigation bar remains consistent.

Step 5. Job Application Confirmation Screen

This screen appears after a user successfully applies for a job.

- A **green confirmation banner** at the top says “Job application confirmed!” with a checkmark.
- The job card shows:
 - Job title: **Junior UX Designer**
 - Company name
 - Brief job description
 - Location and tags (UI/UX, Internship, Remote, etc.)
- An **“About the job”** section describes job duties and expectations.
- A **“Review application”** button allows the user to see what they submitted.
- A **“Go Back”** button sits at the bottom.

Step 6. Job Listing Card (Before Applying)

This screen presents the job card in its normal state before submitting an application.

- Same job information:
 - **Junior UX Designer**
 - Short role summary, tags, and location.
- Includes a **“Save”** button so users can bookmark the job.
- Shows the same **About the job** section with a full role description.

- A **“Review application”** button suggests the user may already have started the application.
- The bottom still features the navigation bar.
-

10. Track Application Tracker

This screen gives students an overview of their job application progress. It displays whether an application is pending, viewed, shortlisted, or declined. This transparency empowers users and reduces anxiety by keeping them informed without needing to contact employers manually. The status tracking feature is a key part of improving communication and reducing uncertainty for job seekers.

User story (Kauan and Jakub)

As a student, I want to save jobs I'm interested in, so I can easily find and apply to them later.

11. Push Notifications

This screen showcases how DreamWork delivers real-time updates to users. Push notifications alert students about new job listings, application updates, and employer responses. This feature increases engagement and ensures that students never miss important opportunities. Notifications are designed to be timely, relevant, and non-intrusive, enhancing overall user experience.

User Story 7: Push Notification for New Jobs (Kauan)

As a student I want to receive push notifications when a new job matching my saved criteria is posted so that I can be one of the first to apply.

12. Job Details Screen

1. Smart Job Suggestions Screen

This screen shows job recommendations tailored to the user.

- A green banner at the top confirms **“Job saved!”**
- Filter options include:
 - **Filters, Sort by Relevance, and Location.**
- The first job card shown is **Junior UX Designer**, featuring:
 - Company name
 - Short job description
 - Tags (UI/UX, Internship, Remote, etc.)
 - Location
- Buttons: **Save** and **Apply**.
- Below the job card is a **“Why you are seeing this”** explanation:
 - Skills match (e.g., Figma)
 - Similar viewed roles
 - Interests (e.g., Design & Creativity)
- Another suggested job (**Frontend Developer**) is listed with its own Save/Apply buttons.
- Navigation bar at the bottom is consistent.

2. Your Saved Jobs Screen

This page lists all jobs the user saved.

- Title: **“Your Saved Jobs”**
- Each card includes job details, similar to the suggestions screen.
- The first card (Junior UX Designer) contains:
 - **Remove** button
 - **Apply** button
 - A red label stating **“Expiring in 12h”**
- The second saved job card (Frontend Developer) also has **Remove** and **Apply** buttons.
- Clean, simple layout with two saved jobs visible.
- Bottom navigation bar remains present.

3. User Profile Screen

This is the user's personal profile overview.

- Profile section shows:
 - A placeholder user icon
 - User name (e.g., a sample name is shown)
 - A short description (e.g., Computer Science Student)
 - Location (ATU Galway City)
- Two buttons:
 - **Save Profile**
 - **Invite to Apply**
- **About me** section with a short bio.
- **Education** section:
 - ATU Galway
 - B.S. Computer Science
 - Years of study
- **Contact** details displayed clearly.
- **Relevant coursework** includes items like Database Development, UI/UX Design, and Machine Learning.
- **Skills section** shows skill tag badges (UX, JavaScript, Figma, Python, HTML, CSS, Node.js, Databases, etc.)
- **Projects** section lists personal or academic projects.
- Links to **Portfolio website**, **Github**, and **LinkedIn** appear at the bottom.
- Navigation bar stays consistent with the rest of the app.

User Story 4: Job Details (Jakub)

- Card: As a user, I want to view job details so that I can learn about pay, company, and how to apply.

Reflection and Continuous Improvement

Kauan

As Scrum Master for this project, I focused on keeping our team organized and moving forward. I organized our team's schedule and made sure everyone could meet for our ceremonies. I helped the team decide on our project vision and core idea, then documented our Definition of Ready and Definition of Done in OneNote to give us clear quality standards.

I wrote eight user stories and helped the team with story sizing to get us started. I also contributed creatively by creating early sketches, concepts, and brainstorming notes, plus designing our product box. During sprints, I supported the team with task assignments and helped with prototyping and design activities when needed.

The main thing I learned was balancing doing work myself versus enabling the team. While getting hands-on helped initially, I realized my real value comes from coaching rather than creating. Seeing the team grow more confident when I stepped back was really rewarding.

For future projects, I want to better organize my own work and time to be more efficient. I'll focus on facilitating workshops rather than creating artifacts myself, which will help the team develop stronger ownership from the start while still meeting all our deadlines.

My contributions:

My Contributions

- Organized our team's schedule and made sure everyone could meet.
- Helped the team in deciding the project vision and core idea
- Did the Definition of Ready and Definition of Done in OneNote.
- Did eight user stories and helped the team in story sizing
- Created early sketches, concepts, and brainstorming notes
- Designed the product box
- Supported the team with task assignment
- Supported the team in prototyping and design activities
- Did some parts of the team Report.

Jakub

During this project, I took on the role of Product Owner, responsible for defining the product vision and ensuring the backlog reflected the most valuable work for the team. I created and prioritized user stories, grouped them into epics, and maintained clear acceptance criteria so the developers always knew what was expected. I contributed heavily to our planning activities by preparing the velocity estimates, drafting our sprint plan, and ensuring our DoR and DoD were practical for the team.

Through this process, I learned how important communication is in Agile. It became clear that even small misunderstandings about requirements can slow down progress. I also gained a better understanding of how to balance time constraints, and technical feasibility, something that is central to the Product Owner role.

One improvement I would make in future sprints is ensuring more frequent backlog refinement sessions. At times, stories were added quickly without full discussion, which goes against Agile's emphasis on refinement and shared understanding. More regular refinement would help us keep the backlog healthy and reduce ambiguity as we

approach each sprint. I also believe better communication could solve a lot of issues that arose during the time of this project's development.

My contributions:

- Created all epics, refined user stories, grouped requirements
- Developed the sprint plan and calculated team velocity
- Designed risk assessments, contingency plan, and Gantt timeline
- Led creation of PowerPoint, architecture diagrams, and report content
- Created design template for the prototype
- Took part in prototyping the app
- Coordinated tools setup (GitHub, Jira, OneNote)
- Documented sprint reviews and retrospectives
- Created README on GitHub
- Maintained OneNote pages and burndown chart
- Tracked sprint progress on Jira
- Refined the prototype screens to better fit with design
- Created interactions between prototype screens

Joy

Throughout this project, my role was centred on testing the prototype, checking the quality of each implemented feature, and supporting the team with UI development and documentation. I was responsible for reviewing the user flows, checking that each screen met its acceptance criteria, and ensuring the interactions in the prototype worked as expected. I also helped prepare and organise our Assignment 05 documentation, including adding Jira screenshots, explaining prototype screens, and updating the report layout so everything was clear and aligned with the project requirements.

One of the biggest things I learned during this project was the importance of identifying issues early and communicating them clearly. As the tester, I often found areas where screens needed improvement or where user flow was unclear, and sharing this

feedback helped us refine the prototype. I also gained a better understanding of how testing fits into Agile development and how collaboration between roles is essential for building a complete product.

In future projects, I want to focus on improving my testing structure by creating test cases earlier and reporting findings more systematically. I also want to become more involved during design discussions so potential issues can be prevented instead of corrected later. Overall, this project helped me grow more confident in both testing and UI development.

My contributions

- Tested all prototype screens to ensure they met acceptance criteria
- Checked user flow (student & employer journeys) for errors or inconsistencies
- Reported issues and suggested improvements during sprints
- Helped design several UI screens for the prototype
- Wrote full explanations for each prototype screen in the report
- Updated the Assignment 05 PDF layout and Table of Contents
- Added Jira screenshots, sprint evidence, and documentation to the report
- Supported the team in organising OneNote and report structure
- Helped link prototype screens and check visuals for consistency
- Assisted with small development and design tasks during sprints
